## Requirements Management

Manage specifications & requirements

Requirements tracing, history & baselines

Using data (e.g. "20kg") as values inside requirements

(possible w/ special formulas)

Variant management (requirement pools with connected copies)

## Verification Management

Verification traceability

Verification method management

(analysis, simulation, test...)

(only test)

(only test)

Verification to test object tracking

(only through Jazz suite)

Automatic verification from calculations or simulation results

(possible w/ special formulas)

## Engineering Data Management

Engineering budgets (mass, power, etc.)

Calculations

Re-use of values across requirements

(possible w/ special formulas)

Documents with up-to-date connected values

## Test Management

Requirement-to-test mapping

(on procedure or step level)

(only on procedure level)

(only on procedure level)

Test planning & execution

## Collaboration

Commenting on items

(only office 365)

Review management

What-if analysis
